Short Company presentation

(R & D guidelines, international activities, etc.)

Company specialized in molecular testing for thyroid anywhere in the world.

DESCRIPTION OF ITS TECHNOLOGY AND CAPABILITIES IN R & D

(Products, technologies, applications, services, etc.)

Around 15.000 unnecessary thyroid surgeries are performed every year in Spain. This is not only the worst outcome for the patient, but a huge unnecessary cost for healthcare. Lose-Lose. Although European Thyroid Guidelines recommend the use of thyroid molecular tests, none of the 4 molecular tests available worldwide are available in Spain/Europe. Our startup, Onkos, developed one of these 4 molecular tests, called mir-THYpe full, which has been used in Latin America since 2018 and have strong evidence publish in high impact journals. Now, we are going global, and we are able to test samples from any place in the world.

PROPOSED COLLABORATIVE PROJECT IN R & D

(As much detail as possible, both in what it offers and what you want in a potential partner)

In Spain we are looking for Hospitals which are interested to, not only offer our test for its patients in clinical routine, but also to collaborate in validation studies in Spanish/European population. We are also open to discuss Tech Transfer with private companies who might be interested on distribution of our test.
